---

As of this morning we are removing liquid from tanks 26 and 27 for storage at Texas Molecular while they upgrade their injection well. Indications are that the first load is free of sludge and oil.

Gary, the The Texas Molecular Injection well is down for repairs so we will only be able to remove 9 tank trucks full (45,000 gallons) until they finish the repair of the well. NORCO wanted to draw down the water level in the tanks so that any rainfall would not cause an overflow.
